(C) Cut Out Hole	9-9/16"
(M) Mount Depth	5-3/16"

Rough-N-Kits  
available  
RK-SS8

## OBJECTIVE

The new SweetSpot in ceiling 8" speaker is an alternative to the norm for consumers who are extremely particular about musical staging and directional sound.

Built with the highest quality crossovers, tweeters and drive components, the SS speaker is the best value for that type of client. It delivers a precise sound stage without side effects such as echos, rattles, reflections and refractions that are found in most speakers that can be manually aimed. It literally puts the listener in the center of the action and delivers nothing more or less than it should.

In addition to its high quality and agility, it can also be musically tailored to match an end users' most critiqued tastes. This is done by utilizing the built-in bass and tweeter tonal adjustments which are front mount for ease of use.

Also with its low profile design, it won't protrude and can be painted to color match any decor; leaving the speakers transparent while the sound is robust and accurate.

## INTENDED USE

- ✓ Contractors, Custom Installers & Retailers
- ✓ Home Theaters & 2-Channel/Music Systems
- ✓ Particular Audiophile Consumers
- ✓ New Construction and Retrofit Applications
- ✓ Surround Sound Enhancements
